EDUCATION

National University of Singapore (NUS) Aug 2023 – May 2027 (Expected)

Bachelor of Computing in Computer Science with minor in Japanese and Music

- NUS Merit Scholar; GPA: 4.55/5.00 (First-Class Honors)
- **Relevant Modules:** Data Structures & Algorithms, Object-Oriented Programming, Computer Organisation, Software Engineering, Machine Learning Research

Technical University of Denmark (DTU) – Exchange Program Jan 2026 – Jun 2026

- **Relevant Modules:** High Performance Computing in Python, Computer Vision, System Design and Integration, Database Systems

Nagoya University (Japan) – NUS Overseas College (NOC Japan) Jul 2025 – Dec 2025

- **Relevant Modules:** Entrepreneurship, venture validation, and startup innovation in Japan

WORK EXPERIENCE

Visa — Systems Engineering Intern Jun 2026 – Aug 2026

Technologies: Kubernetes, Linux/Unix, Docker, Python, Ansible, Go, CI/CD, Cloud Infrastructure

- Built LLM-powered tools using the **Model Context Protocol (MCP)** to enable agentic workflows for AWS infrastructure provisioning and Terraform deployments.
- Contributed to **model distillation** initiatives to improve tool selection, invocation accuracy, and reliability in agentic systems.
- Developed infrastructure automation and CI/CD workflows to improve deployment repeatability, operational efficiency, and system reliability.
- Supported Kubernetes and Terraform Operations onto AWS, including cluster troubleshooting, secure networking, lifecycle management, and reliability-focused infrastructure work.

DouDouDoujin (NOC Japan) – Full Stack Engineer Intern Jul 2025 – Dec 2025

Technologies: TypeScript, Hono (backend), Remix (frontend), PostgreSQL, Prisma, Docker, CI/CD, Cloud

- Shipped features like prove of purchase stamps, manga in 6 months, working through the entire product lifecycle from market research and API design to backend implementation, frontend UI/UX build, and performance evaluation
- Identified and resolved critical web performance bottlenecks, improving Largest Contentful Paint (LCP) by 80%, Time to Interactive (TTI) by 60%, and page load time by 40%
- Built the automated test suite from scratch using Bun, writing unit tests for every feature and integrating it into CI/CD via GitHub Actions and deployment to Fly.io, raising code coverage from 0% to 100%

MikoMiko — AI Software Developer Intern Jan 2025 – Jun 2025

Technologies: Swift, Unity, React, Typescript, Firebase

- Built the company's core 3D character pose to image system in Unity, shipping it across two platforms, WebGL web app and a native iOS app, allowing for PC and iOS cross platform compatibility and functionality
- Built and shipped a React + Firebase MVP within two months, integrating authentication and real-time data storage
- Built iOS screens and features solo from UI/UX specs, then optimised Unity and iOS builds to cut app storage by 50%, reduce load time from 8s to 3s, and improve frame rate from 20 fps to 60 fps

Brahm Centre Ltd. — Software and Data Analytics Intern Feb 2023 – Jun 2023

Technologies: HTML, Apex, Salesforce Lightning, Workato, SurveyMonkey

- Designed and implemented a Salesforce Lightning Web Component using HTML and Apex, automating attendance tracking and decreasing manual data entry by 90%, saving approximately 20+ hours of administrative work weekly
- Automated data entry workflows using Workato and SurveyMonkey, reducing data error rates by over 95% and enhancing ease of use for over 100+ end users
- Performed data cleaning and sorting on 10,000+ records within Salesforce Lightning, improving data accuracy and operational efficiency by streamlining access to critical information

PROJECTS

BrainHack — TIL AI Competition

May 2024 – Jun 2024

Technologies: Python, FastAPI, Docker, PyTorch, CUDA

- Co-led a 5-person team integrating ASR, NLP, and VLM models to deliver an end-to-end multimodal AI
- Built a high-performance FastAPI inference microservice containerized with Docker, enabling sub-100ms model response times
- Achieved Finalist placement among 50+ teams, recognized for technical depth and system scalability

Linkify AI – Co-Founder & Head of Software Development

Apr 2024 – Apr 2025

Technologies: Typescript, Flask, React, MySQL, Docker, Agile, Python

- Co-founded an AI-powered job matching platform home services in Singapore through a unified and tailored marketplace for independent and mid-sized home service providers (<https://www.linkifyai.com/>)
- Architected a Flask-based REST API and MySQL schema to support real-time job matching for a team of 4, delivering a functional MVP during a 48-hour hackathon, achieving First Runner-Up as a result
- Currently incubated at the NUS Hangar, supporting continued product iteration and startup growth

SKILLS

- **Languages:** English, Mandarin, Japanese (N4)
- **Programming:** Python, C++, Java, JavaScript, HTML/CSS, Flask, React, Remix, TypeScript, Swift
- **Web Frameworks:** React.js, Flask, Bootstrap, FastAPI
- **Databases:** MongoDB, MySQL, PostgreSQL
- **Tools:** GitHub, Gitlab, Salesforce, Workato
- **Interest:** Violin, Badminton, Hiking
